The Memory Organizer is a short interactive narrative about how attention changes the meaning and emotional force of memory. The player works with a desktop assistant to enter an office worker's subconscious and organise seven memories without deleting or rewriting them. The experience progresses from an office briefing to a Memory Room, a crisis inside a Giant Clown formed from accumulated shame and anxiety, a set of four conversational confrontations, and a final return to the office. Agency is expressed through onboarding pace, the order and response paths of mirror conversations, and especially the physical redistribution of memories among Focus, Context, and Background. The final report reads those placements as a qualitative attention pattern rather than a score or a single correct ending. This preserves a coherent dramatic arc while allowing the player to express an interpretation of the client's present needs.
《记忆整理师》是一段关于"注意力如何改变记忆的意义与情绪力量"的短篇互动叙事。玩家与一名桌面助手合作，进入一位办公室职员的潜意识，在不删除或改写任何记忆的前提下整理七段记忆。体验从办公室任务简报开始，随后进入记忆空间；由羞耻、焦虑和压力累积而成的巨型小丑引发危机，玩家在其内部完成四场对话式对抗，最后返回办公室。玩家能动性体现在入职引导节奏、镜子对话的处理顺序与回应路径，以及

把记忆实体重新分配到“焦点” “语境”和“背景”三个注意区域的具身行动中。最终报告把这些位置解释为定性的注意模式，而不是分数或唯一正确结局。这样的设计在保持完整戏剧弧线的同时，也允许玩家表达自己对来访者当前需要的理解。

Current implementation and process status / 当前实现与开发进度

The five-stage narrative spine is implemented in scene_WebGL.unity through the final compositional report. A script build completed on 16 August 2026 with zero errors. The current work history also shows staged development of office branching, Hippocampus dialogue, memory assignment, the Giant interior, audio, and the final report. The report system stores seven final placements and selects one of three authored fragments for each memory, so 21 fragments support 2,187 possible final configurations. This is a deliberate production strategy rather than a claim that 2,187 hand-authored stories exist.

截至当前版本，scene_WebGL.unity 中从办公室到最终组合式报告的五阶段叙事主线已经实现。2026 年 8 月 16 日的脚本构建以零错误完成。Git 工作记录也显示了办公室分支、海马体对话、记忆分配、巨人内部场景、音频和最终报告的分阶段开发。报告系统保存七个最终位置，并为每段记忆从三个已写好的文本片段中选择一个，因此只需 21 个片段即可支持 2,187 种最终配置。这是一种有意识的制作策略，并不意味着项目手工撰写了 2,187 个完整故事。

Evidence in the current project 当前项目证据	**Status and report implication** 状态及其对报告的意义
Office, surface-memory, mirror, final placement, and report states 办公室、表层记忆、镜子、最终分配和报告状态	Implemented and scene-bound; supports the full narrative argument. 已实现并绑定到场景，支持完整叙事论证。
Branching dialogue and four mirror conversations 分支对话与四场镜子对话	Implemented; all four mirror orders and failure/retry paths still require full-flow play testing. 已实现；全部镜子顺序与失败/重试路径仍需全流程测试。
WebGL end-to-end run and in-world report readability WebGL 端到端运行与世界内报告可读性	Outstanding validation; do not describe these as fully tested until evidence is captured. 仍待验证；在取得证据前不要描述为已完全测试。
XR headset deployment XR 头显部署	XR architecture exists, but deployment evidence is not present in the supplied project context. XR 架构已存在，但给定项目上下文中没有部署证据。

[TO ADD BEFORE SUBMISSION: exact measured playthrough duration. The template recommends a maximum of five minutes.]
[提交前补充：实测单次游玩时长。模板建议单次体验最长不超过五分钟。]

Narrative State Network / 叙事状态网络

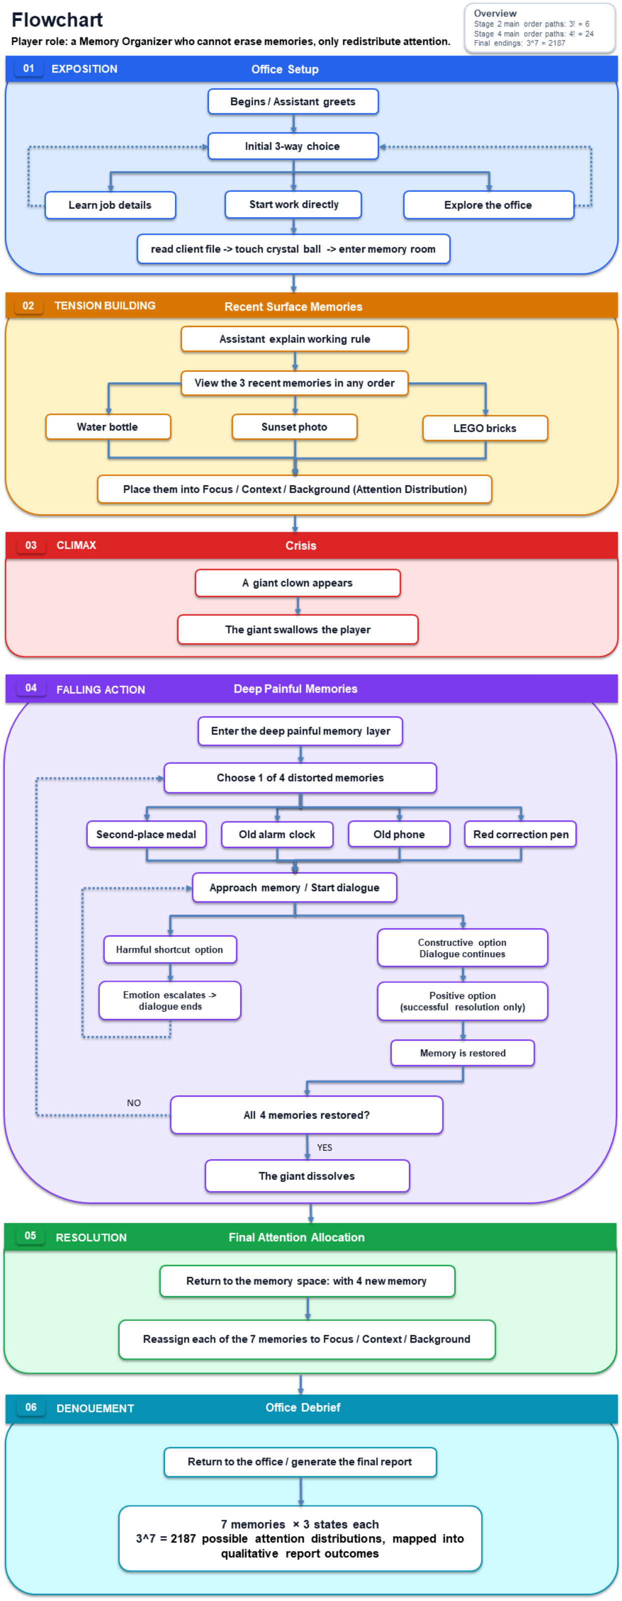

Figure 1. Narrative State Network with the Freytag phase assigned to each major state.

图 1：按 Freytag 戏剧阶段标注的叙事流程图。

Figure 1 maps the runtime state machine to a Freytag arc. The network separates guaranteed dramatic progression from local agency. The office choices reconverge before entry into the

subconscious. Surface-memory placement triggers the crisis regardless of the provisional arrangement, because the Giant is the consequence of buried painful memories rather than a punishment for a wrong answer. The Mirror Chamber is a hub: the four memories can be approached in any order, and harmful responses loop locally without corrupting later states. The fourth successful conversation produces the dramatic climax. The player then receives their widest expressive choice during the falling action by redistributing all seven memories. The denouement is not one authored ending but a report composed from the confirmed attention pattern.
图 1 将运行时状态机映射到 Freytag 戏剧弧线，并区分必然发生的戏剧进程与局部能动性。办公室选项在进入潜意识前重新汇合。无论初步分配如何，放置表层记忆都会触发危机，因为巨人源于被压抑的痛苦记忆，而不是对“错误答案”的惩罚。镜室是一个枢纽：四段记忆可以按任意顺序处理，有害回应会形成局部循环，但不会破坏后续状态。第四场成功对话构成戏剧高潮。随后，玩家在下降行动阶段重新分配全部七段记忆，获得最强的表达性选择。结局不是一个预写好的固定终点，而是根据确认后的注意模式组合而成的报告。

Freytag function Freytag 功能	**Narrative state** 叙事状态	**Agency carried by the state** 该状态承载的能动性
Exposition 开端	OfficeDialogue OfficeDialogue	Learn the role, explore repeatedly, or start work. 了解角色、重复探索或开始工作。
Inciting incident 触发事件	AwaitCrystalBall / TransitionToHippocampus AwaitCrystalBall / TransitionToHippocampus	Choose when to finish reading and activate the transition. 决定何时结束阅读并激活转场。
Rising action 上升行动	AwaitMemoryPlacement AwaitMemoryPlacement	Inspect and provisionally place three surface memories. 查看并初步放置三段表层记忆。
Escalation 冲突升级	GiantCrisis / SwallowTransition GiantCrisis / SwallowTransition	Embodied loss of spatial control while head perspective remains available. 空间控制被具身化地剥夺，但头部视角仍可控制。
Climax 高潮	MirrorChamber MirrorChamber	Choose mirror order and dialogue responses; failure creates a retry loop. 选择镜子顺序与对话回应；失败会形成重试循环。
Falling action 下降行动	FinalMemoryPlacement FinalMemoryPlacement	Revise seven independent Focus/Context/Background assignments. 修改七段记忆各自的焦点/语境/背景分配。
Denouement 结局	BackToOffice / View Report BackToOffice / View Report	Read the personalised consequence pattern and return to page one. 阅读个性化后果模式并返回电脑首页。

Player Agency / 玩家能动性

Agency in The Memory Organizer is layered rather than evenly distributed. At the office, the player controls onboarding pace. They may hear the job explanation, explore, return, and then begin; a used explanation option disappears while exploration remains repeatable. These routes create at least five intentional onboarding sequences, but they share the same client assignment. The design therefore offers freedom to establish curiosity and readiness without multiplying downstream production work.

《记忆整理师》的能动性是分层分布的，而不是在每一时刻保持相同强度。在办公室阶段，玩家控制入职引导的节奏：可以先了解工作内容、探索办公室、返回，再开始工作；已使用的工作说明选项会消失，而探索可以重复。这些选择形成至少五条有意设计的入职路径，但最终都汇合到同一位来访者的任务，从而在提供好奇和准备空间的同时，不成倍增加后续制作量。

The strongest authored branching occurs inside the Giant. Four mirrors can be visited in any order, already producing 24 orderings before dialogue variation is counted. Each mirror has a two-round conversation. Two plausible first responses continue into different second-round prompts; harmful shortcuts at either round end the attempt, intensify the local voice and environment, and restore Start Conversation. A failure changes the player's immediate experience but does not permanently remove content or generate an incoherent global state. This makes mistakes narratively legible as the persistence of an internal belief rather than as a conventional game-over screen.

最强的手工分支出现在巨人内部。四面镜子可按任意顺序处理，仅顺序就产生 24 种排列，尚未计入对话差异。每面镜子包含两轮对话。第一轮中的两个合理回应会进入不同的第二轮问题；任一轮中的有害捷径都会结束当前尝试、强化局部声音和环境，再恢复“开始对话”。失败会改变玩家当下的体验，但不会永久移除内容，也不会制造不连贯的全局状态。错误因此被叙事化为内部信念的持续存在，而不是传统的游戏结束画面。

The final redistribution is the principal form of expressive agency. Every memory can be moved among Focus, Context, and Background, and the arrangement can be revised until confirmation. Seven independent ternary choices yield 3^7, or 2,187, attention configurations. These are real state differences: the report names each final category and selects a corresponding outcome fragment for every object. However, the system avoids a simplistic good/bad meter. Focus is not always positive, and Background is not equivalent to deletion. The player is choosing what should occupy current attention, not editing the client's history.

最终重新分配是主要的表达性能动性。每段记忆都可以在“焦点”“语境”和“背景”之间移动，并可在确认前反复修改。七个相互独立的三元选择产生 3^7，即 2,187 种注意配置。这些是真实的状态差异：报告会显示每段记忆的最终类别，并为每个物件选择对应的结果片段。但系统避免了简单的好坏计分；“焦点”不一定是正面结果，“背景”也不等于删除。玩家决定的是哪些内容应占据当前注意力，而不是改写来访者的人生。

This approach deliberately combines real and illusory choice. The Giant crisis always occurs after the third surface memory, so the preliminary layout does not branch around the central conflict. That convergence is visible only at the system level; within the story, the crisis follows the discovery that painful memories have been excluded. The illusion of an unconstrained story world is supported by free inspection order, spatial revision, local dialogue loops, and a final state that genuinely changes the report. The design is innovative in its use of compositional consequence: a small authored vocabulary produces many coherent interpretations without pretending to simulate an unlimited story.

该方法有意结合真实选择与选择幻觉。第三段表层记忆放置后，巨人危机必然发生，因此初步布局不会绕开

核心冲突。在系统层面这是汇流；在故事内部，危机则来自痛苦记忆长期被排除。自由的查看顺序、空间位置修改、局部对话循环，以及真正改变报告的最终状态，共同维持了故事世界看似开放的感受。其创新点在于“组合式后果”：少量经过控制的文本单元能够产生大量连贯解释，而无需假装模拟一个没有边界的故事。

A limitation remains. During the grab and swallow sequence, translational movement is intentionally locked to prevent the player escaping the staged transition, although camera rotation and tracked head orientation are not forcibly overridden. This is a short restriction on navigation, not a detached screen-based cutscene. The final report should describe it accurately rather than claim uninterrupted locomotion.

仍有一项限制：在抓取和吞咽段落中，系统会暂时锁定平移移动，避免玩家逃离已编排的过场，但不会强制覆盖相机旋转或头部追踪方向。这是对导航的短暂限制，并非脱离玩家视角的屏幕式过场。最终报告应如实说明这一点，而不应声称移动从未中断。

Seven Memory Objects and Attention Outcomes

Each restored deep memory contains both the original event and the new understanding formed during dialogue.

Memory object	Event represented	Background / Low attention	Context / Medium attention	Focus / High attention
Water Bottle Recent memory	The client has a fever but stays alone in the office to finish a project, using the water bottle to take medicine while continuing to work.	The client spends less time revisiting the distress of working while ill, reducing the immediate emotional burden. However, they may continue to minimize physical symptoms and delay rest or support.	The client recognizes signs of illness and overwork and is more likely to rest, take medication, or request support without allowing physical discomfort to dominate their attention.	Physical discomfort and the experience of having to continue working remain highly active. The client may repeatedly focus on pain, resentment, and fear of being unable to continue.
Sunset Photograph Recent memory	On the way home, the client stops checking work messages, leaves public transport one stop early, and spends several quiet minutes watching and photographing the sunset.	The memory remains available but rarely enters the client's current attention. Work and responsibility may continue to overshadow small restorative experiences.	The client occasionally returns to this peaceful memory and allows themselves to pause without abandoning their responsibilities.	The client actively notices and creates similar restorative moments. Daily life is no longer defined only by work, productivity, and responsibility.
LEGO Bricks Recent memory	The client spends a long evening assembling a LEGO model. Watching it gradually take shape brings them into a calm flow state and creates private satisfaction and a sense of achievement.	The satisfaction of completing the model remains accessible but is rarely used to support the client's self-image. External judgment may still have a stronger influence on their sense of ability.	The client can return to this private achievement when facing criticism. It balances external judgment without turning the hobby into another test of performance.	Patient creation and personal judgment receive greater attention. The client's sense of ability becomes less dependent on external recognition, and the hobby becomes a stable source of satisfaction and self-worth.
Second-Place Medal Deep memory	As a child, the client proudly shows their parents a second-place medal, but they ask why the client did not come first. The client now understands that effort can be valued without giving up the desire to grow.	The parents' reaction no longer drives constant comparison. However, the achievement itself is also less available as a source of recognition for the client's effort.	The client remembers both the pain and the new understanding. They can value their effort and continue improving without needing first place to prove their worth.	Despite the new understanding, the ranking and the parents' disappointment frequently return to attention. Achievement remains closely tied to proving personal worth.
Old Alarm Clock Deep memory	While ill as a student, the client is told that tiredness is not a reason to avoid responsibility. The client now understands that rest is part of self-care and future responsibility.	Guilt associated with rest becomes less active. However, the client may be less likely to use this experience as a reminder to notice exhaustion and physical limits early.	The client recognizes physical limits and understands rest as part of responsible self-care rather than an escape from responsibility.	The client repeatedly evaluates whether they are tired enough or have earned the right to rest. Self-care risks becoming another responsibility that must be performed correctly.
Old Phone Deep memory	During a university group project, the client asks a teammate for help and is told not to hold the group back. The client now understands that one rejection does not determine whether they deserve support.	The rejection no longer controls future decisions about asking for help. The client is more willing to approach trusted people without treating their response as a judgment of personal worth.	The client remembers both the risk of rejection and the legitimacy of asking for support. They choose whom to trust carefully, although some hesitation may remain.	The client frequently anticipates rejection. They overexplain, repeatedly edit, or delete requests for help and are more likely to carry pressure alone.
Red Correction Pen Deep memory	A supervisor publicly circles an error and questions the client's competence. The client now understands that an error can require correction without defining their overall ability.	The humiliation no longer defines the client's ability. They can correct routine mistakes without repeatedly returning to the event, although similar public criticism may still catch them unprepared.	The client uses the experience as a limited reminder to review work, accept consequences, and correct mistakes without treating an error as proof of total incompetence.	The client remains highly alert to mistakes and authority judgment. Repeated checking may develop into perfectionism, delay, and renewed self-doubt.

Figure 2. The seven memory objects and their qualitative attention outcomes. / 图 2：七段记忆在不同注意层级中的定性结果。

Narrative Coherence / 叙事连贯性

The design begins with a fixed thematic rule: a Memory Organizer can redistribute attention but cannot delete, rewrite, or manufacture memories. This rule protects causality across every route. The client has internalised the belief that worth depends on perfect performance, endurance, and not burdening others. Three recent memories and four deep memories test that belief from different angles. The water bottle repeats working while ill; the sunset and LEGO memories offer alternative sources of value; the medal, clock, phone, and correction pen materialise perfectionism, guilt, isolation, and fear of mistakes. Because every object relates to the same belief system, different inspection orders remain coherent.

设计以一条固定的主题规则开始：记忆整理师只能重新分配注意力，不能删除、改写或制造记忆。这条规则保护了所有路径上的因果关系。来访者已经内化了一个信念：只有表现完美、承受压力并且不给别人添麻烦，自己才有价值。三段近期记忆和四段深层记忆从不同角度检验这一信念。水瓶重复了带病工作；夕阳和积木提供了其他价值来源；奖牌、闹钟、旧手机和红笔分别具象化完美主义、休息罪恶感、孤立以及对犯错的恐惧。由于所有物件都连接到同一信念系统，不同查看顺序仍然保持连贯。

Freytag structure is maintained by separating the dramatic spine from variable content. Exposition and the inciting transition establish the role and rules. Surface-memory placement raises questions about what is missing. The Giant's emergence escalates the conflict, and four mirror conversations make the client confront the beliefs sustaining it. The fourth resolution is the climax because it removes the Giant's support. Final redistribution is falling action: the player applies new understanding rather than fighting a second antagonist. The office report supplies denouement by reflecting the chosen attention pattern.

项目通过把固定戏剧主线与可变内容分开来维持 Freytag 结构。开端与触发性转场建立角色和规则；表层记忆放置逐步提出“缺失了什么”的问题；巨人的出现升级冲突，四场镜子对话迫使来访者面对支撑巨人的信念；第四段记忆被化解时，巨人失去支撑，形成高潮。最终重新分配属于下降行动，玩家把新理解应用到全部记忆，而不是面对第二个敌人。办公室报告通过反映玩家选择的注意模式完成结局。

Several gates prevent incoherent sequencing. The crystal ball appears only after Start Work dialogue and client-report reading. The initial crisis begins only after three distinct surface objects are placed. A mirror contributes to progression only once, after a constructive second-round response. Final confirmation requires all seven distinct memories. The report reads only the confirmed final placement dictionary. These constraints make state transitions explicit while leaving order and interpretation flexible inside each state.

多个门控机制防止顺序错乱。只有在“开始工作”对话和来访者报告阅读完成后，水晶球才会出现；只有三个不同的表层物件都被放置后，初始危机才会开始；每面镜子只有在第二轮选择建设性回应后才计入一次进度；最终确认需要七段不同记忆全部被放置；报告只读取已确认的最终位置字典。这些限制明确了状态转移，同时保留了状态内部的顺序自由与解释空间。

The design also limits production burden. Four mirror instances share one data-driven MemoryDialogueController rather than separate scripts. Initial and final placement reuse one phased MemoryPlacementController. Most importantly, the report uses 21 object-level fragments rather than 2,187 complete reports. This compositional structure is robust because every fragment

refers to one memory and one attention category; combining them cannot contradict a global success label because no such label exists. It is both an implementation economy and a narrative choice that resists reducing mental health to a score.
设计也控制了未来制作负担。四面镜子共享同一个数据驱动的 MemoryDialogueController，而不是四套独立脚本；初始分配与最终分配复用同一个分阶段 MemoryPlacementController。最重要的是，报告使用 21 个物件级片段，而不是 2,187 份完整报告。每个片段只描述一段记忆在一个注意类别中的含义，因此组合后不会与某个全局“成功”标签冲突，因为系统根本不设置这种标签。这既是实现层面的节省，也是拒绝把心理健康简化成分数的叙事选择。

Use of Space / 空间的运用

Space carries narrative meaning before it serves navigation. The ordinary office frames memory work as a professional task and gives the assistant a diegetic place to brief the player. The crystal ball acts as a threshold object between administrative reality and the client's subconscious. The Memory Room is an external model of attention: Focus, Context, and Background are not menu options but physical zones. Moving an object changes its relationship to the player's body and to other memories, making an abstract cognitive judgment spatially inspectable.
空间首先承载叙事意义，其次才承担导航功能。普通办公室把记忆工作框定为一项专业任务，也为助手提供了一个叙事世界内部的简报地点。水晶球是行政现实与来访者潜意识之间的门槛物件。记忆空间把注意力外化：“焦点”“语境”和“背景”不是菜单选项，而是物理区域。移动物件会改变它与玩家身体及其他记忆的关系，使抽象的认知判断成为可在空间中检查的东西。

The story then changes scale. The Giant Clown breaks the apparent safety of the Memory Room, removes the roof, and swallows the player. Inside the Giant, four mirrors spatially separate painful beliefs while enclosing them in one body. The player can approach the mirrors in any order, so the chamber functions as a narrative hub rather than a corridor. When all four are resolved, the space dissolves and the freed objects return to the damaged Memory Room. The damaged ceiling makes the crisis leave a persistent spatial trace even though the plot has moved into falling action.
故事随后改变尺度。巨型小丑破坏记忆空间的表面安全感、掀开屋顶并吞下玩家。在巨人内部，四面镜子把痛苦信念彼此分开，同时又把它们封闭在同一个身体里。玩家可以按任意顺序接近镜子，因此镜室是叙事枢纽，而非单向走廊。当四段记忆都被化解后，空间解体，释放出的物件回到受损的记忆空间。破损的天花板让危机留下持续的空间痕迹，即使剧情已经进入下降行动。

Spatial agency is bounded where coherence requires it. Placement zones permit repeated revision, while non-overlapping trigger volumes and distinct object identities ensure that each final memory has one readable state. Coarse Office, Hippocampus, and Nightmare roots are activated by the state machine so only the relevant story space is live, reducing runtime cost for XR. The current build still needs Play Mode checks for overlapping zone triggers, direct movement between zones, return-point alignment, and player visibility at the target WebGL resolution.
在叙事连贯性需要的地方，空间能动性会受到边界约束。放置区域允许反复调整，而不重叠的触发体和不同的物件身份确保每段最终记忆只有一个可读状态。状态机按阶段启用办公室、海马体和噩梦根节点，使 XR

中只有当前相关的故事空间处于激活状态，从而降低运行成本。当前版本仍需在 Play Mode 中检查区域触发重叠、直接跨区移动、返回点对齐，以及目标 WebGL 分辨率下的可读性。

Use of Sensory Triggers (or Multimodal Elements) / 感官触发与多模态元素的运用

Audio, lighting, motion, and fades are used as state information rather than decoration. Picking up a memory plays its associated account, joining object handling to voice. After the second surface placement, a low sound, light fluctuation, and room disturbance signal that the visible set is incomplete. During the crisis, footsteps finish before rumble begins, the Giant approaches, and the roof and player are moved toward the same hand anchor. These cues turn an abstract accumulation of pressure into an approaching physical threat.
音频、灯光、运动和淡入淡出被用作状态信息，而不只是装饰。拿起记忆会播放与其相关的叙述，把物件操作与声音连接起来。第二个表层物件放置后，低沉声音、灯光波动和房间扰动共同提示可见记忆并不完整。危机期间，脚步声结束后才出现隆隆声，巨人逐步接近，屋顶和玩家都被移动到同一个手部锚点。这些线索把抽象的压力积累转化为正在逼近的物理威胁。

Transitions use different visual languages. White fade accompanies the crystal-ball transfer into the subconscious, suggesting connection and entry. Black fade overlaps the final movement toward the Giant's mouth and protects the discontinuity of teleporting to the swallow/fall space. Global Volume weights distinguish Office, Hippocampus, and Nightmare states; the Nightmare treatment fades out as the four mirrors are resolved. Particle emission also fades when the crisis begins, helping the environment communicate a systemic change rather than relying only on subtitles.
不同转场使用不同的视觉语言。白色淡出伴随水晶球把玩家送入潜意识，暗示连接与进入；黑色淡出与移向巨人口部的最后一段运动重叠，并掩护传送到吞咽/坠落空间的不连续性。Global Volume 权重区分办公室、海马体和噩梦状态；四面镜子被化解后，噩梦视觉处理逐渐淡出。危机开始时粒子发射量也会下降，让环境本身传达系统状态改变，而不只依赖字幕。

Mirror audio creates persistence. Each unresolved mirror loops a negative internal statement. A harmful response intensifies the voice and nearby environment, then returns the mirror to idle; a constructive resolution stops the echo and releases the original object. The player can therefore hear the chamber become quieter as progress accumulates. In VR, holding the crystal ball can also provide controller haptics; the WebGL route substitutes a click interaction. This platform distinction should be demonstrated with separate evidence rather than described as identical.
镜子音频创造持续存在感。每面未解决的镜子都会循环播放负面内部陈述。有害回应会强化声音与周围环境，然后让镜子回到待机状态；建设性解决会停止回声并释放原始物件。因此，玩家能够听见整个房间随着进度逐渐安静。在 VR 中，持续触碰水晶球还能提供手柄触觉反馈；WebGL 版本则以点击交互替代。这种平台差异应由不同证据分别展示，而不应描述成完全相同。

Multimodal cues are sequenced by the same state controllers that govern narrative progression, which reduces the risk of contradictory signals. Remaining validation is material: looping footsteps could stall the crisis, subtitle/audio timing must be checked during the black transition, and the

longest report layouts must be tested for readability. These are current risks, not completed results.
多模态线索由控制叙事进度的同一组状态控制器排序，从而降低相互矛盾的风险。剩余验证仍然重要：循环播放的脚步声可能阻止危机继续；黑屏转场期间的字幕与音频时序仍需检查；最长的报告布局也必须验证可读性。这些是当前风险，而不是已完成的测试结果。

Use of Semiotic Elements / 符号元素的运用

The central semiotic system is the relationship between memory objects and attention. The objects are deliberately ordinary: a used water bottle, a sunset photograph, LEGO bricks, a second-place medal, an alarm clock, an old phone, and a red correction pen. Their familiarity lets personal meaning emerge through context. The bottle signifies endurance at the expense of health; the clock turns rest into guilt; the unsent message on the phone signifies fear of burdening others; the red pen turns one mistake into a verdict on competence. The medal and LEGO model contrast external ranking with patient private achievement, while the sunset represents value that does not need productivity or approval.
核心符号系统是记忆物件与注意力之间的关系。物件刻意保持日常：用过的水瓶、夕阳照片、积木、第二名奖牌、闹钟、旧手机和红色批改笔。熟悉感让个人意义从语境中产生。水瓶象征以健康换取坚持；闹钟把休息变成罪恶感；手机上未发送的求助信息象征害怕成为负担；红笔把一次错误变成对能力的总判决。奖牌与积木对比外部排名和耐心完成后的私人满足，夕阳则代表不需要生产力或他人认可也可以成立的价值。

The Giant Clown combines the client object's existing clown imagery with anxiety, shame, pressure, and self-criticism accumulated beyond manageable scale. It is not a random monster and not the consequence of a wrong player choice. The mirrors signify repeated internal speech: they return the client's beliefs as apparently objective truths. They shatter automatically after a successful conversation because the task is reinterpretation, not physical aggression. The original object remains, reinforcing the rule that the memory has not been erased.
巨型小丑把来访者记忆中已有的小丑形象，与长期累积到难以控制的焦虑、羞耻、压力和自我批评结合起来。它不是随机怪物，也不是错误选择的惩罚。镜子象征重复的内部语言：它们把来访者的信念反射成看似客观的事实。成功对话后镜子自动破裂，因为任务是重新理解，而不是实施物理攻击。原始物件仍然存在，再次强化“记忆没有被抹除”的规则。

Focus, Context, and Background avoid moral labels. Their names describe attentional proximity, and the final report uses qualitative coloured labels without success/failure colours, stars, or percentages. This matters because the same placement can have mixed implications. Putting a painful memory in Background can reduce immediate burden but also make its lesson less available; putting a positive memory in Focus can be restorative, but the system does not declare a universal optimum. The semiotic system therefore supports agency while protecting the story's ethical claim that painful and pleasant experiences continue to coexist.
“焦点”“语境”和“背景”避免使用道德化标签。它们描述的是注意距离，最终报告只使用定性的彩色类别文字，不使用成败色、星级或百分比。同一位置可能具有混合含义：把痛苦记忆放到背景可以减轻即时负担，但也可能让其经验教训更难被调用；把积极记忆放在焦点可以带来修复，但系统不会宣布一个普遍正确的最优解。因此，该符号系统在支持能动性的同时，也保护了“痛苦与愉快经历会继续共存”的伦理主张。

Use of Embodied Actions and/or Enacted Elements / 具身动作与展演元素的运用

The player learns the narrative by acting on its metaphors. They inspect the office, activate the crystal ball, pick up memory objects, listen while holding them, place them in spatial attention zones, approach mirrors, begin conversations, and revise the final arrangement before confirmation. These actions make cognition tangible: attention becomes distance and placement; confrontation becomes approaching a reflective surface; reinterpretation releases an object that can later be handled again.
玩家通过对隐喻采取行动来理解叙事。他们探索办公室、激活水晶球、拿起记忆物件、在持有时聆听内容、把物件放进注意区域、接近镜子、开始对话，并在确认前修改最终布局。这些行为使认知过程变得可触：注意力成为距离和位置；对抗成为靠近反射表面；重新理解会释放一个之后仍可再次拿起的物件。

Embodiment also changes the dramatic stakes. The Giant removes the roof, reaches for the player, carries them toward its mouth, and initiates a swallow/fall transition. The system moves the XR origin by position while preserving tracked head orientation, so the player remains perceptually present rather than watching an external avatar. Movement locking is shared across VR and WebGL: locomotion stops during the grab, but mouse look or head turning remains available. This is an authored loss of agency that supports the story's crisis, followed by a return of agency in the Mirror Chamber and the widest expressive control during final redistribution.
具身体验也改变了戏剧风险。巨人掀开屋顶、伸手抓住玩家、把玩家带向口部，并触发吞咽/坠落转场。系统只按位置移动 XR Origin，同时保留头部追踪方向，因此玩家仍然感知自己处于场景内部，而不是观看外部化身。VR 与 WebGL 共享移动锁定：抓取期间停止位移，但仍允许鼠标观察或头部转动。这种被编排的能动性丧失支撑危机段落，随后玩家在镜室重新获得控制，并在最终分配中拥有最强的表达自由。

The assistant also enacts narrative change. It briefs the player, notices missing memories, reacts to the crisis, regains a teleport signal after all four echoes stop, and returns the player and freed objects to the Memory Room. Because these actions are tied to completion events, the assistant behaves as a participant in the story world rather than a floating instruction panel. Diegetic computer pages, world-space choices, mirrors, buttons, and physical zones further reduce reliance on screen-fixed UI.
助手也以行动推动叙事。它向玩家简报、注意到缺失的记忆、对危机作出反应，在四段回声停止后重新获得传送信号，并把玩家和释放出的物件带回记忆空间。由于这些行动与完成事件绑定，助手是故事世界中的参与者，而不是漂浮的说明面板。叙事内的电脑页面、世界空间选项、镜子、按钮和物理区域也进一步减少了对屏幕固定 UI 的依赖。

[TO ADD: XR headset test evidence, device name, comfort observations, frame-rate result, and one labelled screenshot. Without this evidence, do not claim that c7 is satisfied.]
[补充：XR 头显测试证据、设备名称、舒适度观察、帧率结果和一张带标签截图。缺少这些证据时，不要声称已满足 c7。]

Collaborative Practice / 协作实践

[SECTION RESERVED FOR THE STUDENT. Insert English screenshots from official class channels for Weeks 6-10. Caption every item with the exact rubric label (d1-d12), date, channel, what you contributed, and what changed as a result.]

[TO VERIFY AND CITE: Whiteclown N Hallin model/animations; Ace Combat 7 Medals ACE model; clock; cell phone; breakable glass; BrickToy assets; all memory images; all assistant, memory, ambience, heartbeat, rumble, footsteps, monster, and swallow audio files. Remove unused inherited sample citations.]

[需要核对并引用：Whiteclown N Hallin 模型/动画、Ace Combat 7 Medals ACE 模型、闹钟、手机、可破碎玻璃、BrickToy 资产、所有记忆图像，以及所有助手、记忆、环境、心跳、隆隆声、脚步、怪物和吞咽音频。删除最终版本未使用的继承示例引用。]

AI Acknowledgements / AI 使用说明

OpenAI Codex was used as a development and writing assistant. For this report draft, Codex read the project context and assessment documents, compared the report structure with the detailed marking sheet, generated an initial Narrative State Network diagram, and drafted prose for later student review. AI output was treated as a draft: project claims were restricted to evidence present in the repository, and unknown links, collaboration evidence, asset provenance, timing, and headset test results were left as placeholders.

OpenAI Codex 被用作开发与写作助手。在本报告草稿中，Codex 阅读了项目上下文和评估文档，对照详细评分表检查报告结构，生成初始叙事状态网络图，并起草供学生后续审核的文本。AI 输出被当作草稿处理：项目陈述只采用仓库中已有的证据；未知链接、协作证据、资产来源、时长和头显测试结果都保留为占位符。
